

Integrated solutions for deep foundation work

EN

Concrete pump controlled from the Liebherr deep foundation machine

Functions

- pump on/off switch
- reverse pumping
- adjustment of concrete flow
- emergency stop button
- notification of readiness for operation/fault in the pump
- feedback about the level of concrete in the hopper

Advantages

- machine operator also has control over the concrete pump
- optimized concreting process due to elimination of miscommunication with the pump operator
- more efficient performance on site
- increased safety on site

LIEBHERR

Control panel and monitoring in operator's cab
