Boom stacking system

Made to measure

The stacking system is flexible and designed to fit all boom sections up to a width of 3000 mm (9.84 ft) for:

- LR crawler cranes with capacities up to 400 t
- HS duty cycle crawler cranes
- any equivalent boom size

Stacking device for boom width up to 2200 mm (7.22 ft)

| ID number | Name | Size | Stackable boom systems |
|-----------|-----------------|-------------------|--|
| 14102730 | Base carrier | 2200 mm (7.22 ft) | Main booms: 1311, 1512, 2017, 2018 Luffing jibs: 1008, 1309, 1713 |
| 14102728 | Section carrier | 2200 mm (7.22 ft) | Fixed jibs: 0806, 1008 |

Stacking device for boom width up to 3000 mm (9.84 ft)

| ID number | Name | Size | Stackable boom systems |
|-----------|-----------------|-------------------|--|
| 13615207 | Base carrier | 3000 mm (9.84 ft) | Main booms: 2220, 2320, 2821, 2825 Luffing jibs: 1311, 1713, 1916, 2316, 2421 |
| 13612959 | Section carrier | 3000 mm (9.84 ft) | Fixed jibs: 0806, 1008, 1713 |

Better storage, easy to use

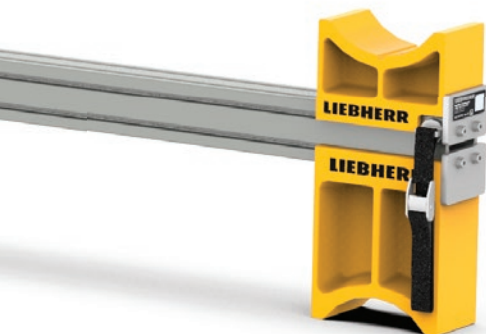

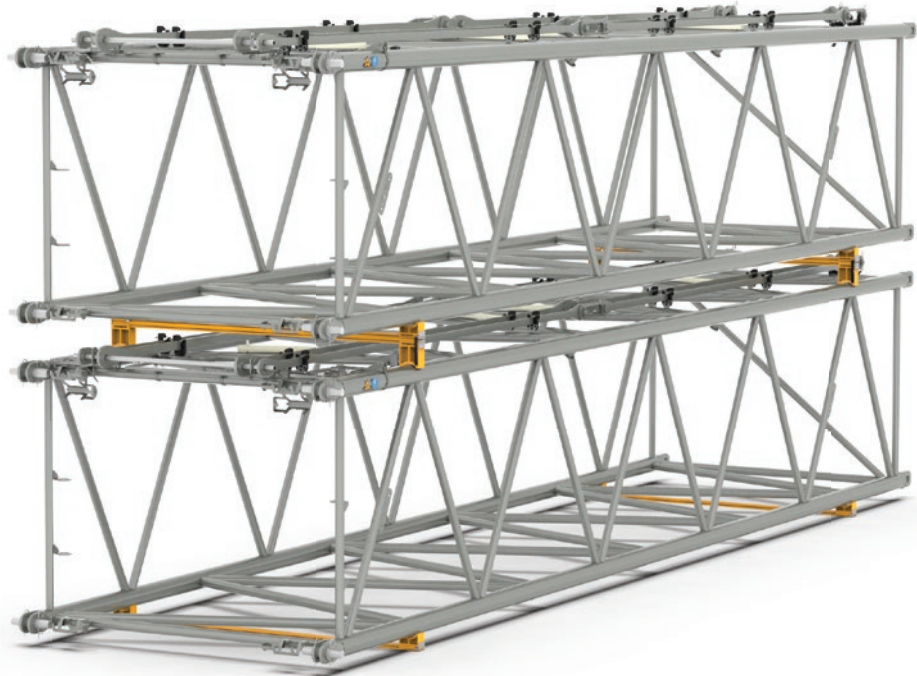

The supports are made of plastic injection mould and run on aluminium profiles. The system comes in two widths: 2200 mm and 3000 mm (7.22 ft and 9.84 ft). Each set comprises two stacking devices, and each stacking device is supplied with a QR code with direct link to the operator's manual meaning all information is available at any time.

Safety is top priority

Unlike customary heavy wooden blocks that have to be placed by hand on top of the sections, the supports can be mounted to the boom sections at ground level before stacking, avoiding ladders and making life easier for personnel. Furthermore, the supports are designed to fit the boom sections exactly. The booms are thus protected from rough edges and uneven stacking, which can lead to dangerous situations.

Your benefits at a glance:

- Safe and secure: booms are securely stacked
- Easy to use: personnel can work at ground level
- Less wear and tear of the boom: no sharp edges or uneven blocks
- Long-lasting: robust long-lasting material
- Flexible: for many kinds of booms

Liebherr Transform

Overhauls

Depending on your needs we offer overhauls of individual components, customized packages, or complete machine overhauls. These can be carried out as an all-round carefree package at one of our many service centres located all over the world, or if desired, at your site.

Upgrades

Starting with on-site consulting and demand planning through to actual installations, we are at your side as a strong solution partner. We offer a wide range of upgrades to ensure your machine continues to meet all the requirements of new legislation and standards, and also to maintain high versatility to compete on the jobsite of the future.

Retrofits

We provide many retrofits designed to make your machine more economical, to significantly improve performance, and to make life easier for you and your employees. These systems have been developed by Liebherr following decades of technological experience and in response to your requirements.
