
Operator's cabin boom control

Liebherr Transform

LIEBHERR

Liebherr Container Cranes Ltd.

Stronger

Faster

Smarter

Greener

Straightforward boom control at the touch of a button

Previously, boom control was often located on the A-frame, with the crane driver having to make his way to the A-frame boom control station to raise or lower the boom.

Retrofitting a driver's cabin boom control eliminates this trip and allows full boom control from the comfort and safety of the drivers cabin.

Retrofitting of the boom control comes with the installation of an additional camera and monitor so that the crane operator can visually confirm that the boom is correctly latched before leaving the crane.

Boom controls are located in the P3 drivers side console.

Liebherr Transform

Unleash the full potential

Liebherr Transform is the upgrade and modification service from Liebherr Container Cranes Ltd.

Ports and terminals are under increased pressure to reduce costs and boost performance through increased productivity, faster turnarounds and reduction in equipment downtime. This can sometimes result in increased capital expenditure for new equipment.

As a Liebherr Container Cranes customer, you already own the best container handling equipment on the planet. Why not unleash its full potential by upgrading it?

Liebherr Transform uses the best available technologies to make your crane stronger, faster, smarter, greener and ultimately ... better.
