

Liebherr Slurry Wall Cutter

LSC 8-18

EN

LIEBHERR

Concept and characteristics

Liebherr slurry wall cutter package

Designed for the demands of urban areas:

- Vibration-free slurry wall installation – excavation through cutting
- Slurry walls with depths down to 120m
- Complicated geometric wall forms – cutter turning device
- Adaptation to various wall dimensions – modular cutter design
- Low space requirements – no additional power pack required
- Low exhaust emission due to an efficient drive system and engine complying with Stage V
- Optional Local Zero Emission with electric engine
- Low noise emission – optional Eco-Silent Mode

Universal carrier machine HS 8130.1 – for diverse deep foundation applications

- Hydraulic/mechanical slurry wall grab
- Spherical grab with casing oscillator (up to Ø3.5m)
- Lifting operation and material handling grab

Dimensions

HS 8130.1 with cutter LSC 8-18

*with optional crowd winch

Slurry wall cutter LSC 8-18

Cutter turning device:

- Enables continuous hydraulic turning of the cutter. Thus, all possible working positions are covered entirely.

Lower and upper steering flaps:

- 12 independently controllable steering flaps enable correction of the cutting direction.
- The actual positions of the flaps are displayed on the operator's monitor in real time.
- Central lubrication system allows for quick and easy lubrication (optional).

Verticality measurement system:

- Integrated assistance system supports and records the cutting process.
- Slurry wall deviations along the X and Y axes as well as the rotation round the Z axis are measured.

Modular cutter frame:

- The modular cutter frame can be adapted to suit special requirements on the jobsite, thus offering highest flexibility.

Cuttings discharge pump:

- Generously designed pump leads to increased efficiency and service life.
- Focus lies on ease of assembly and service.

Cutter wheel drive:

- High torque for toughest construction tasks.
- Focus lies on maximum service life of the gearbox and utmost ease of assembly.

Cutter wheels:

- Different types are available for different ground conditions.
- The innovative form lock ensures quick and easy exchange of the wheel sets.

Hose drum system DS 80/110 T

Crowd winch:

- One of the two standard free-fall winches (350 kN) is used as a crowd winch.
- The special winch control enables especially high precision when lowering the cutter.
- Continuous adjustment for crowd force and winch speeds.

Additional diesel tank:

- An additional 500-litre diesel tank increases the total capacity to 1270l.
- This enables longest possible self-sufficient operation.

Return filter:

- The hydraulic oil flowing back from the cutter is fed through filters to protect the hydraulic system of the carrier machine from contamination.

Hose drum carrier frame:

- Enables quick and easy mounting and dismounting of the cutter carrier.
- Excellent access to all important components.

Drums for cuttings hose and energy chain:

- Optimized for maximum service life of the hoses.
- Efficiency is increased through the large diameter of the hoses.

Optional platforms:

- These enable quick and safe access to the drums from both sides.
- Easily retrofitted.

Special boom head:

- Designed for cutting operation with cutter turning device.

Modular cutter frame

- Using a removable cutter frame extension the cutting length can be adapted to suit the circumstances, e.g. restricted height.
- The cutter can be adapted for all common slurry wall thicknesses with little effort.
- The same cutter wheel drive can be used for bite lengths of 2800mm and 3200mm.

LSC 8-18 C

Bite length (A) [mm]	2800					3200				
Wall thickness [mm]	800	1000	1200	1500	1800	800	1000	1200	1500	1800
Weight [t]	29	31	31	33	34	32	34	36	39	40

LSC 8-18 L

Bite length (A) [mm]	2800					3200				
Wall thickness [mm]	800	1000	1200	1500	1800	800	1000	1200	1500	1800
Weight [t]	33	35	37	40	41	38	40	41	45	46

The given values are guidelines and can vary with the final configuration of the machine.

Technical description

Carrier machine HS 8130.1		8005.01.03
Machine according to EN 474-12		
Engine power	Liebherr V8 Stage V / Tier 4f	570kW
Diesel tank capacity		770 l + 500 l = 1270 l
Hydraulic oil tank capacity		1170 l
Hoist winch 1 cutter		350 kN (free-fall winch)
Hoist winch 2	option	350 kN (free-fall winch)
Rope diameter		36 mm
Usable rope capacity	per winch	232 m

Hose drum system DS		
Max. working depth		80 m / 110 m / 120 m*
Cutter turning device	continuous, hydraulic	-50° to +95°
Energy chain		20 m sections
Cuttings discharge line		40 m sections

Slurry wall cutter LSC 8-18		
Length of cutter body (C / L)	with / without intermediate section	8 m / 12 m
Bite length		2800 mm, 3200 mm
Wall thickness		800, 1000, 1200, 1500, 1800 mm
Flap control (option)	150 mm lift	12 pcs. (with position indicator)
Max. capacity of cuttings discharge pump	152 mm (6")	see head curve (page 9)
Torque of cutter wheel drive		110 kNm
Rotational speed of cutter wheel drive	continuous	0-28.5 rpm
Min. depth of initial excavation		3000 mm

Liebherr slurry wall cutter package (LSC 8-18 1500x2800)	
Operating weight (carrier machine + hose drum system + cutter)	approx. 190 t
Operating weight (carrier machine + hose drum system without cutter)	approx. 150 t
Ground pressure of standard undercarriage with cutter	1.7 kg/cm ²

* with optional crowd winch

The given values are guidelines and can vary with the final configuration of the machine.

Cutter wheel drive and cutter wheels

Cutter wheel drive:

- High torque for toughest applications (110 kNm each)
- Focus on max. service life of the gearbox
- Innovative, redundant sealing system
- Gearbox with optimized temperature control for toughest assignments
- Innovative hydraulic system protects the drive from overrevving when loads break away
- Quick assembly and disassembly of the cutter wheel drive
- Degree of utilization and gear oil temperature are monitored in real time
- Thus unforeseen downtime can be reduced and the service life significantly increased

Cutter wheels:

- Large variety of cutter wheels available for the most diverse ground conditions
- Cutting the space between the cutter wheels ensured by folding teeth
- Innovative form lock (spur gearing) ensures quick and easy exchange of the cutter wheel set
- Soils up to an uniaxial compressive strength of 120 MPa can be cut

Turning device

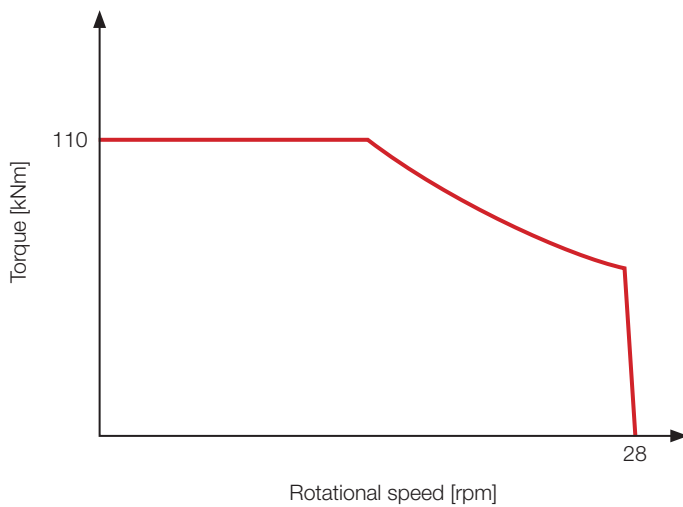

Turning device:

- Continuous hydraulic turning of the cutter from the operator's cab
- All working positions can be served
- Turning through hydraulic cylinders in the cutter frame
- Turning angle $-50^\circ / +95^\circ$
- Roller bearing lubricated by the central lubrication system – low maintenance

Carbody counterweight

Weight 3.5 t **2x**

Carrier machine HS 8130.1

Basic machine

with HD undercarriage, A-frame, 2x 350kN winches and self-assembly system for basic counterweight, without boom foot and basic counterweight – fully tanked and ready for operation

Width	4000 mm
Weight without hoist ropes	78000 kg
Weight of hoist ropes (2x 90m)	6.455 kg/m

Basic machine

with A-frame, 2x 350kN winches and self-assembly system, without boom foot, basic counterweight and crawlers – fully tanked and ready for operation

Width	3500 mm
Weight without hoist ropes	51000 kg
Weight of hoist ropes (2x 90m)	6.455 kg/m

Crawler

2x

Weight	14900 kg
--------	----------

Boom foot (No.2018.33)

Weight	3215 kg
--------	---------

Boom section 3 m (No.2018.33)

Weight	750 kg
--------	--------

Boom section 6 m (No.2018.33)

Weight	1230 kg

Verticality Assistant

for slurry wall cutters (PDE, LiDAT, PDR2)

The Liebherr Verticality Assistant for slurry wall cutters is fully integrated in the Liebherr machine's control system for monitoring and recording the slurry wall cutting process. With the help of the Verticality Assistant deviations in the slurry wall along the X and Y axes, as well as the rotation round the Z axis are measured.

- Visualization of the measurements for the machine operator
- Real time support for the cutting process through cable data transfer from the cutter to the operator's cab
- Recording of the process, productivity and operating data as well as the relevant machine and application parameters
- Mobile data transfer via the telematics system (LiDAT) to the reporting software in the office (PDR2)
- Transparent display of the inclination values during cutting
- Optional gradual measurement of the slurry wall to calculate conclusive deviation values (subject to the process specifications)
- Optimum support for the machine operator through an innovative, graphic control system in order to carry out successful measurements
- Automatic limitation of the cutter's hoisting gear speed for optimum measuring conditions
- Position of the steering flaps is displayed and recorded throughout the whole process
- Simple guidelines for calibrating the verticality measuring system.

This system allows control of the precision for the whole depth of the trench. Reports can also be created for the whole cutting process. These enable traceability of the application and proof of quality.

X – deviation along the X axis

Y – deviation along the Y axis

Z – rotation around Z axis

 – inclination / turning
