LIEBHERR

Liebherr Container Cranes Ltd.

Stronger

Faster

Smarter

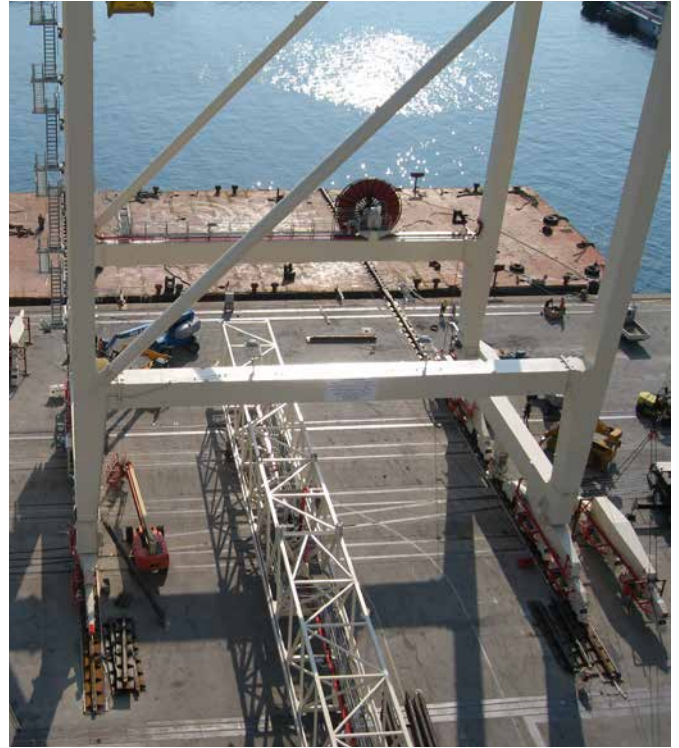

Greener

Hassle-free relocation

A Liebherr container crane is a significant investment and sometimes in the search for continued operational improvements and efficiencies, it makes sense to move a crane from one port to another, or from one quay to another.

At Liebherr, we can handle all of your crane moves. A team of experienced engineers will plan the move from start to finish ensuring minimal disruption to your daily operations. Using either self propelled multi-axle trailers (SPMT) or skidding systems where appropriate along with barges or ships, we will work with you to ensure a fast and professional move. We will also ensure the crane is tested and commissioned in its new location in line with our high Liebherr standards.

SPMTs or Skidding

Depending on your operational requirements and of course the permitted ground loadings at your facilities, either a skidding system or the use of SPMTs will be preferred. Where skidding is the preferred option, the use of pads and load spreading, can reduce the ground loads even further.

SPMTs provide greater flexibility, particularly suited to complex moves where the crane has to move in many different directions. Whatever the method, Liebherr have decades long experience moving, barging and unloading cranes.

Liebherr Transform

Unleash the full potential

Liebherr Transform is the upgrade and modification service from Liebherr Container Cranes Ltd.

Ports and terminals are under increased pressure to reduce costs and boost performance through increased productivity, faster turnarounds and reduction in equipment downtime. This can sometimes result in increased capital expenditure for new equipment.

As a Liebherr Container Cranes customer, you already own the best container handling equipment on the planet. Why not unleash its full potential by upgrading it?

Liebherr Transform uses the best available technologies to make your crane stronger, faster, smarter, greener and ultimately ... better.
