Hydraulic Block-Off Kit – optimum equipment for maximum protection

This kit provides a comprehensive range of elements to ensure that hydraulic components are safely and efficiently blocked off in the course of exchange or repair work. Whether for high-pressure components or small leakages, the right element is included in this optimised parts kit.

Your benefits:

- Quick and easy maintenance as all block-off elements are clearly arranged in one case
- No oil contamination and associated costly remedial work
- Potential damage to hydraulic components can be eliminated through use of correct equipment
- Robust and mobile case means the elements are easily transported and readily available on site

For further information please contact your local service partner or take a look at our website:
