

Liebherr Establishes Customer Service Workshop for Rail Transport Equipment in North America

Korneuburg (Austria), September 2014 – Liebherr-Transportation Systems has expanded its service network with a new workshop in Saline, Michigan (USA).

The workshop, which has been set up recently, will be used for repairing, overhauling and testing hydraulic components for the leveling systems of rail vehicles. Thus, Liebherr-Transportation Systems will be able to offer a broad range of services to vehicles manufacturers and operators in North America, who increasingly use such hydraulic applications. Being so close to the customer also enables the company to substantially reduce transport distances and turn-around times. Currently, the service technicians at Saline are currently servicing the leveling systems of the rail cars operated by the Chicago Transit Authority (CTA) in Chicago, Illinois (USA) and by the operator Metro in Houston, Texas (USA).

The customer service workshop has been created on the grounds of Liebherr-Aerospace Saline, Inc. This service station of Liebherr-Aerospace has successfully been servicing and repairing the air management systems, flight control and actuation systems and landing gear systems of aircraft and helicopters since 1991. Liebherr-Transportation Systems has benefited from the existing infrastructure and is set up according to its own requirements.

Liebherr-Transportation Systems – Renowned Manufacturer of Railway Technology

Liebherr-Aerospace & Transportation SAS in Toulouse (France) is one of eleven divisional control companies in the Liebherr Group and coordinates all activities in the fields of transportation and aviation equipment. It employs around 4,900 people worldwide.

Liebherr's transportation systems division deals with air conditioning, hydraulic actuation systems and electronic components for rail vehicles of all kinds, and is backed by many years of experience in the development and manufacture of these

technologies. In addition to its own sales and service centers, the division has access to the Group's development and service facilities around the world. This global set-up means that Liebherr-Transportation Systems is there for its customers wherever they may be.
