

### **Liebherr-Mining and Monnis International solidify their relations at Bauma 2016**

**Munich (Germany), April 2016 – Liebherr-Mining and the Mongolian company Monnis International are again intensifying their longstanding relationship: When M. Baz Chuluunbaatar, CEO of Monnis, visited the Bauma construction trade show in Munich (Germany), agreements were made to enlarge Liebherr's mining product offerings for Mongolia. Dozers from Telfs (Austria) and mining trucks from Newport News, Virginia (USA), will now also be offered there.**

The new agreements were symbolically sealed during Bauma, when Mr Willi Liebherr and Mrs Sophie Albrecht, members of the administrative board of Liebherr-International AG, presented M. Baz Chuluunbaatar with scale models of the brand new PR 776 dozer and the T 264 mining truck. Both machines are exhibited on the Liebherr stand at the world's largest construction trade show.

Monnis International LLC, headquartered in Ulaanbaatar (Mongolia), is one of Mongolia's largest industrial holding companies with over 1,200 employees and 10 subsidiaries. The company has become a national leader in mining machinery sales, mining support services, infrastructure and energy construction projects, automobile and automotive parts distribution, international freight forwarding, foreign trade as well as air services.

In 2002, Monnis became an official dealer of the Liebherr Group delivering mining and construction equipment as well as mobile cranes to Mongolia. Through sales, leasing and rental transactions, Liebherr and Monnis have already supplied Mongolian-based mining and construction companies with more than 350 machines, including dozers, excavators and mobile cranes. In addition to machines, Monnis provides a wide range of on-site services and is partially supported by technicians from the Liebherr production sites. These services include maintenance support, remanufacturing programs with in-country facilities, spare parts logistics and full training programs.

Thanks to their strong relationship, Monnis and the Liebherr Group's mining division are able to offer of efficient and reliable mining machines for safe operations even

under Mongolia's harsh climatic conditions. Almost forty mining excavators, including nine R 996's, have been delivered throughout the country to coal, copper and gold mines. The latest one was the electric version of an R 9350, which was assembled at the end of 2015.
