Press release

With the new LCM 1.0 Liebherr offers a concrete mixing plant for smaller budgets

- Up to 60 m³ output per hour
- Quick and easy assembly with minimal foundation work
- Inexpensive transport in just two containers possible
- Galvanised design for long service life

With its new LCM 1.0 concrete mixing plant, Liebherr is reacting to market requirements. The demand for smaller, transport-optimised plants for a manageable budget is growing. Concrete production with an in-house mixing plant is becoming more attractive.

Bad Schussenried (Germany), 27 August 2020 - The demand for a smaller, reliable mixing plant is growing steadily. More and more contractors want to produce their own concrete requirements themselves with a smaller mixing plant. The focus is on low procurement costs. Reliability and simple operation are also expected.

Liebherr’s response is the LCM 1.0. A reliable concrete mixing plant with special advantages: The plant is not only economical to purchase, but also during transport, installation and operation. In addition to stationary use, pre-assembled subassemblies and steel foundations predestine the plant for mobile use, for example on construction sites or leased land. It is possible to relocate the plant without any problems.

The operation of the plant is easy thanks to an intuitive control system via a laptop. Ascent and platforms are spacious and ensure optimal accessibility. Cleaning and service work is thus simplified. The proven Liebherr ring-pan mixing system ensures an output of up to 60 m³ of fresh concrete. Various aggregate silos with a storage volume of 40 to 100 m³ are available. The plant can be equipped with up to 3 cement silos (100 tons each). The following optional equipment can be ordered: Moisture measurement, ice scale, cladding, control container and much more.

The robust and fully galvanised design guarantees the operating company a long service life. Even with this smaller mixing plant, the customer benefits from the usual Liebherr quality. Likewise, Liebherr’s worldwide service is available to them at any time.

About the Liebherr Group
The Liebherr Group is a family-run technology company with a highly diversified product portfolio. The company is not only one of the largest construction equipment manufacturers in the world, but also provides high-quality and user-oriented products and services in a wide range of other areas. The Liebherr Group includes over 140
companies across all continents, employs more than 48,000 staff and in 2019 achieved combined revenues of over 11.7 billion euros. Since its foundation in 1949 in Kirchdorf an der Iller in Southern Germany, Liebherr has been pursuing the goal of achieving continuous technological innovation, and bringing industry-leading solutions to its customers.
