

Press release

## **New at Liebherr: Electronic Manufacturing Services**

- **Cost-effective: high diversity and flexibility for small and medium batch sizes**
- **High-end: high-quality electronic assembly in Lindau on Lake Constance**
- **One stop: extensive, independent portfolio with comprehensive service**

**The Liebherr Components Division is growing and expanding its service portfolio at the Lindau site. In addition to comprehensive services relating to the Test Center for electronics, Liebherr now also offers Electronic Manufacturing Services (EMS).**

Nussbaumen (Switzerland), 7. October 2020 – Liebherr-Elektronik GmbH in Lindau (Germany) is the competence centre for electronics within the Liebherr Components Division. New investments at the Lindau site and constant technological development also increase local expertise. The result is the expanded Electronic Manufacturing Services. In addition to the mounting and coating of printed circuit boards, services also include equipment assembly and the development of complex test concepts. Development services in the field of electronics, as well as additional post-production services complete the skilled offer in Lindau.

The equipment on site is optimised for small and medium batch sizes, from single units to five-digit annual quantities. This allows high flexibility at low costs. The integrated quality management in accordance with EN 9100 and high testing levels ensure the durability of the electronics in the field.

### **On land, in the air, at sea: extensive electronics expertise**

For more than 40 years, Liebherr electronic components have proved their worth every day worldwide in a wide variety of industries, such as aviation, construction and agriculture. Vast experience under the most demanding operating conditions is incorporated in the electronics manufacturing processes. It is the guarantee of high quality in component mounting and assembly.

---

Liebherr offers a comprehensive range of services in Lindau. One of the biggest advantages of such an all-round service is the short distances. In addition to electronics development and production, the division also offers component management, long-term storage and repair services. This means full support over the entire product life cycle. Thanks to the in-house Test Center, the qualification and verification of electronic components can also be carried out internally – even to aviation standards.
